

**CLAIM AMENDMENTS:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1-26. (Canceled)

27. (Currently amended) A portable audio player comprising:  
a memory to store data associated with a plurality of audio tracks; and  
a processor coupled to the memory, the processor to receive biometric data and to select  
one of the plurality of audio tracks according to the biometric data;  
wherein the processor is adapted to store the biometric data in the memory;  
wherein the portable audio player further comprises a communication port to  
communicate the biometric data to a computing device;  
wherein a power supply is applied to the communication port to power a peripheral  
device, the peripheral device to monitor a user to determine the biometric data.

28. (Previously presented) The portable audio player of claim 27, wherein the biometric data comprises a pulse rate.

29. (Currently amended) The portable audio player of claim 27, wherein the portable audio player further comprises a second communication port responsive to [[a]] the peripheral device to receive the biometric data.

30. (Previously presented) The portable audio player of claim 29, wherein the peripheral device comprises a pulse rate monitor.

31. (Canceled)

32. (Previously presented) The portable audio player of claim 27, wherein the processor is adapted to select a first audio track of the plurality of audio tracks when the biometric data exceeds a threshold.

33-40. (Canceled)

41. (Previously presented) A method of selecting an audio track in a portable audio device, the method comprising:

receiving biometric data associated with a user;  
selecting an audio track of a plurality of audio tracks from a memory of a portable audio device based on the biometric data; and  
applying a power supply to a communication port to power a peripheral device, the peripheral device to monitor a user to determine the biometric data.

42. (Withdrawn) A portable audio player comprising:

a memory to store data associated with a plurality of audio tracks; and  
a processor coupled to the memory, the processor to receive movement data associated with a user and to select one of the plurality of audio tracks according to the movement data.

43. (Withdrawn) The portable audio player of claim 42, wherein the movement data comprises a speed of the user.

44. (Withdrawn) The portable audio player of claim 42, wherein the movement data comprises a distance traveled by the user.

45. (Withdrawn) The portable audio player of claim 42, further comprising a communication port responsive to a peripheral device to receive the movement data, and wherein the peripheral device comprises a pedometer.

46. (Withdrawn) The portable audio player of claim 42, further comprising:  
a communication port to couple the portable audio player to a peripheral device;  
a transceiver coupled to the communication port;  
the processor coupled to the communication port and to the transceiver, the processor to  
receive a character via the communication port and to adjust a bit rate of the  
transceiver until the character is recognized, the processor to receive data  
associated with a user via the communication port and to select one of the  
plurality of audio tracks based on reception of the data.
47. (Canceled)
48. (New) The method of claim 41, further comprising adjusting a volume of an output  
of the portable audio device based on the biometric data.
49. (New) The method of claim 48, wherein the volume is adjusted to a pre-determined  
level.
50. (New) The method of claim 41, wherein the biometric data comprises pulse rate data.
51. (New) The method of claim 50, wherein the pulse rate data is received from a pulse  
rate monitor.
52. (New) The method of claim 50, wherein selecting an audio track comprises:  
comparing the pulse rate data to a threshold; and  
selecting a first audio track of the plurality of audio tracks when the pulse rate data  
exceeds the threshold.
53. (New) The method of claim 41, further comprising converting the biometric data to a  
particular format.

54. (New) The method of claim 41, wherein the biometric data comprises pedometric data.

55. (New) The method of claim 54, wherein the pedometric data is received from a pedometer.

56. (New) The method of claim 41, wherein the biometric data comprises speed data.

57. (New) The method of claim 56, wherein the speed data is received from a speedometer.

58. (New) The method of claim 41, further comprising storing the biometric data.

59. (New) The method of claim 58 further comprising downloading the biometric data to a computer application.

60. (New) The method of claim 59, wherein the computer application is configured to receive, store, chart and manipulate the biometric data.

61. (New) The method of claim 41, further comprising displaying the biometric data.
